The Model 350 pivot plate eliminates the need to drill a pivot hole in the workpiece. It is great for tabletops, decorative grooving and arcs. It has cross marks for locating the pivot pin to the center.

We recommend 1 ½ inch wide double-sided Manco outdoor carpet tape to secure the pivot plate to the work piece.

The plate comes with tape on the back for first time use. This tape can be removed and new tape applied after use.

The smallest disk you can make is 3 7/16 Inches  
The smallest cutout you can make with 1/4 inch bit is 3 15/16 Inches

Made in USA
